

WHAT IS CLAIMED IS:

1. A clip for holding down panels in a suspended ceiling integrally formed of synthetic resin and comprising an
5 upper inverted U section with downwardly extending arms, a leg depending from each of the arms of the upper inverted U section, and a downwardly biased hinge connecting each of the legs to the inverted section, wherein the resin forming the upper inverted U section, and the legs, is relatively
10 rigid, and the resin forming the hinges is relatively flexible.
2. The clip of claim 1 wherein the clip is fabricated by a dual extrusion process.
3. The clip of claim 2 wherein the synthetic resin is
15 polyvinyl chloride.
4. The clip of claim 1 wherein the upper inverted U section has tabs on the inside of the U for locking the clip to the bulb of a grid beam.
5. The clip of claim 1 wherein the upper inverted U
20 section has rounded portion on the bottom of each leg.
